

Django Framework

Merit Ehab

Project

Library System

- Library system of 2 apps one for Books and one for Authors.
- The system should provide the CRUD operations for the Books and the Authors.
- Every book should have an author.
- Every book should have one of these statuses (Published, Withdrawn, Draft)
- An Author have a set of books that were written by him.
- Author detail page should have a list of his books.
- The system should provide a search box where you can search by book's name or author's name.
- Custom action in the admin, set the status to "Published" for the selected books.
- Bouns:
 - Support the CRUD operations for Books and Authors using [Django REST Framework](#)
